About Think Safe

Think Safe, Inc. was founded to focus on innovation and technology within emergency products and services to help you win the war against the nation's leading killer—Sudden Cardiac Arrest (SCA).

First Voice can provide a full line-up of automated external defibrillator (AED) and AED Accessories and first aid sourcing for your organization with convenient and high-value options. In addition, our leading solution—the HeartSine samaritan AED—is the most rugged, light weight and low-cost AED on the market.

No matter which AED you buy, it is only part of the solution. While Good Samaritan language protects users of AEDs, companies and organizations that purchase AEDs have to abide by their state's civil liability immunity laws for AED acquirers. Historically, many AED distributors have not provided the correct guidance for their customers regarding this blanket of legal protection. Now you can not only purchase the best AED for each environment and application, but as a First Voice Distributor you can now offer a complete solution to ensure your customers have a solid and complete AED program that protects everyone—including you!

As a wholesaler and manufacturer/developer, Think Safe provides best-in-class AED sourcing, servicing, management/maintenance, and compliance programs. We understand the dealer channel and help our dealers properly position with clients. Our goal is to be more than an inventory source—we can help you speak to your clients' need and win more business.

AN INTEGRATED APPROACH

- Carry/sell all brands of AEDs and accessories, including re-certified and generic
- Create patent-protected products with structured product development and support teams
- Turnkey or customized solutions increase your upsells, and client retention and value-add offerings

AED AND FIRST AID/EMERGENCY RESPONSE PROGRAM MANAGEMENT

- Regulatory compliance (ANSI, OSHA, NFPA, FAA, FDA, CASA, Civil Liability Immunity, etc.)
- Tracking solutions
- Policy, protocols, documentation, tools
- First Voice Manager AED compliance system
- Medical direction/oversight

NATIONAL TRAINING ORGANIZATION MARKET INTELLIGENCE WITH BRANDED (RED CROSS, AHA) TRAINING

- Training and AED response protocols expert (ECC/ILCOR/AHA/Red Cross and more)
- Integrated certification training (First Aid, BBP, CPR, AED, etc.)
- Instructor-led courses
- E-learning/online
- Blended course curriculum
- In-house train-the-trainer

LEADING EMERGENCY/FIRST AID INDUSTRY TECH SOLUTIONS DEVELOPER AND MANUFACTURER

- Custom software/hardware development of first aid and program compliance management technology solutions
- NEW alerting technology
- Extensive product lines coverage for your client's total program needs
- Patented products

Need AEDs? How can we help?

Funding/Purchases

Take advantage of deep discounts we offer and unique product offerings that help you keep the deal if it goes to bid. Stop working with sourcing partners that bid cheap on AEDs against you! Ask us for examples of bids where master dealers are not helping the AED market and are causing margin erosion.

Maintenance

Use of our award winning firstvoicemanager.com free as a dealer benefit of Think Safe's support; this program reminds you of any expiration dates.

Compliance

Rely on our technical expertise and call us for free technical support, including post-event review assistance and of course program management and oversight/direction.

Training

Use of our online firstvoicetraining.com online refresher training portal and our Training Tracker also free with AED program implementation.

Free AED Program Resource Tools

AED equipped stickers, CPR/AED posters, AED response protocols that are current to AHA guidelines, pediatric decal/card set (cuts down on costs and time during pediatric emergencies), and more.

What are you doing to ensure that state AED Laws are being followed?

The First Voice complete AED package includes state-by-state compliance checklists.

Inc. as Your Enterprise AED Program Supplier Partner?

info@firstvoice.us firstvoice.us 888-473-1777 ©Think Safe, Inc.

The First Voice Advantage

The First Voice complete AED package includes the following complimentary components:

- Rx (prescription for the AED)
- AED inspection tags
- AED state-by-state compliance checklists AED acquirers (civil liability immunity laws)
- AED policy templates and examples (hard and soft copy)
- AED fast response kit (scissors, razor, gauze, instructions, tamper-proof sealed, CPR barrier)
- AED administrator toolkit (AED practice, AED protocols, etc.)
- AED site assessment survey and placement certificate CD for employee training on AED use (or online demo)
- Technical assistance including post-event review services at no charge
- Free expiration notification of any pads or batteries
- Free recall or regulatory update notification of any pads or batteries
- CPR/First Aid/Training certification assistance, if needed (in person or online)

Additionally, First Voice has the **guaranteed lowest distributor price** on the market for the following:

- AED program management software - annual fee-based with 3 levels of notice for any noncompliance
- Medical direction services nationally in U.S.
- AED signs (3D or flat with large 8 x 10 faces, metal)
- AED door or window stickers (AED on premises)
- AED or CPR posters for mounting next to the AED
- AED fast response kits (scissors, razor, instructions, gauze, gloves, CPR barrier)
- Alarmed or non-alarmed wall mount cabinets with clear viewing window options (temp-controlled, waterproof outdoor, various sizes)
- Rugged storage carrying case options (waterproof including temp-controlled)

Think Safe Value Proposition: *an Integrated Approach*

Why should Think Safe become your enterprise AED program supplier partner?

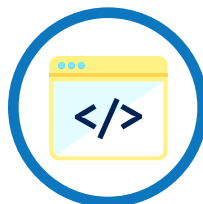

NEEDS/DISCOVERY

Rely on our technical expertise for solutions and needs assessment and we have an in-house Enterprise System that focuses on technical support and a custom built knowledge base embedded into our systems. Help is only a call or a few clicks away.

DESIGN/SOURCING

Comprehensive consultative approach – *15-Year Comparison Sheet* and the ability to easily bundle with other products/services for best-designed programs to client needs. May include specialized program resources and tools including compliance with AED owner civil liability immunity state laws (unique to our First Voice Advantage).

IMPLEMENTATION/ TRAINING

Effective communication tools and various training programs.

SERVICING/ MAINTENANCE

Award winning firstvoicemanager.com and round out Think Safe's technical support and medical direction capabilities; helps you win our NEW patented mobile solutions deals for servicing; archives and tracking information on recalls or servicing needed or performed; integrates with training portal for training tracking ease; archives critical documents and is OSHA best practice compliant!

*IP rating for dust is not certified by industry test but most probably would equate to a "4" rating based upon peer comparison
 **Upgrade fees apply ^ HeartSine® samaritan® PAD 360P is model for Auto
 ***Add \$100 for automatic
 *^9 volt lithium self-test battery required. Needs to be replaced annually.
 **^add \$100 for automatic
 *^Non ECG model
 DISCLAIMER: The information contained on this 15 year overall cost comparison and features/benefits document is based upon minimum advertised price (MAP) internet prices or suggested retail prices and manufacturer technical specification product sheets provided by the various AED manufacturers. Pricing is subject to change at any time and this comparison is intended to be used as an features/benefits analysis tool and for comparing purchase price and long term ongoing costs over 15 years.

AED Implementation

How critical is response time to survival?

Why Think Safe, Inc. as Your Enterprise AED Program Supplier Partner?

SINGLE-SOURCE PROVIDER

- Direct sales and support for all AED manufacturer makes and models
- One-stop shop certified AED program provider
- Competitive supplier solutions result in clients having to work with multiple vendors for each separate program element

COMPREHENSIVE AED MARKET KNOWLEDGE/INDUSTRY-LEADING TECHNICAL SUPPORT AND SERVICING

- Objective recommendations
- Comprehensive and demonstrated technical expertise of best practices and compliant AED programs
- Relationships with all AED manufacturers results in:
 - reasonable comparisons for ALL makes/models of AEDs
 - unbiased recommendation-set based on client's specific needs and buying criteria

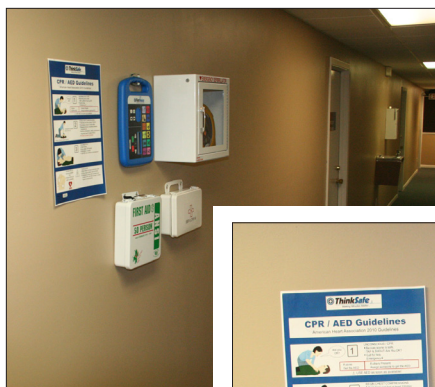

COMPETITIVE PRICING AND A PROGRAM INTEGRATION APPROACH

- Kitting, bundling, low cost and efficient upgrades/add other providers saves you time and money
- Procurement decisions equipment evaluation
- Training decisions (online or in person) and notifications to staff
- Policy and communication to staff and new hire tools
- Medical oversight or medical direction services, as needed
- Administration duties of inspection checks and "maintenance ease"
- Safety and responder team training assistance/general staff training
- Easy compliance solution "visibility" with online 24/7 access by anyone
- E-minder solutions and hierarchy reporting for program transparency

AED Device & Manufacturer Comparisons That Include:

- Price (initial/consumables)
- Ease of Use (# steps, etc)
- Maintenance Ease (# supplies)
- Expiration Monitoring (pad/battery)
- Asset Life/Warranty/IP Rating
- Indemnification Coverage
- Footprint/Size/Weight
- Durability/Storage Needs
- Post Event Support (free pads, etc)
- Upgrade Support (AHA, costs, etc)
- Time to Shock/Technical Specs
- Efficacy Rates (survival stats)
- Impedance (patents, technology)
- Technology Updates (current, FDA)

Why have an AED?

Having an accessible Automated External Defibrillator (AED) used to quickly deliver a life-saving shock often means the difference between life and death. When a victim experiences sudden cardiac arrest, with a shockable rhythm, every minute counts; every minute a victim goes without defibrillation, the chances for survival decrease by 7%-10%. Having an AED installed on location can allow on-site trained responders, or nearby emergency responders, deliver potentially life-saving defibrillation therapy quickly and effectively.

Address the biggest killer in the U.S.!

HeartStation Remote Monitoring System (RMS)

AEDs (Automated External Defibrillators) run daily self-tests to make certain they will function properly in an emergency. If there is a problem, the AED goes into fault mode. This fault mode can happen at any time and can render the AED useless. And if the AED doesn't work when needed, people can die. Then lawsuits follow. It is impossible to keep a constant watch over the AED to make certain that it is working. However, Think Safe's First Voice Manager and AED NOTIFY or HEARTSAFE mobile applications protect you with a monthly visual reminder and inspection by you or your staff.

NOW AVAILABLE! Constant AED watching is here! RMS monitors the AED, and alerts you immediately if there is a fault. It even tells you if the AED is unable to run its self-test or if the AED is missing or is no longer located in storage cabinet/case.

HeartStation RMS Features:

- Provides AED status remotely with any brand AED, anywhere.
- Installs easily in any cabinet, new or existing and most Pelican AED cases.
- Monitors AED and reports if the AED is in fault mode to the HeartStation RMS/Think Safe cloud.
- Reports missing AEDs and AEDs not able to perform self-tests.
- Uses a replaceable lithium battery with a 5-year life.

- Operational out of the box. No setup or configuration required. Nothing else to buy.
- Connects automatically to the strongest cellular signal (has access to over 500 carriers)
- Reports to you through the Think Safe & First Voice manager alerts.

Emergency Management Mobile App (EMMA)

Many states are passing mandates for schools to update their Emergency Response plans and technology is here to help keep costs down and improve communication. Grants are available and active shooter/active violence events continue to grow in the United States. EMMA (Emergency Management Mobile Application) is new technology that empowers bystanders and incident managers to provide improved communication and basic assistance in emergency situations before the arrival of trained first responders. EMMA's push notification technology provides greater communication capability over standard text and/or email messaging platforms that can improve the management of emergencies, saving lives and improving school and workplace safety. **And EMMA is the most affordable solution available on the market today.**

EID Quick Features

CPR Metronome

Allows classroom use during CPR manikin training

Complete Audio & Visual Guidelines

Reinforcement for first aid steps or CPR steps and AED use reminders

AED first aid or CPR Refresher Training

ECC & International First Aid Guidelines

Training Drills

Training exercises for: Adult, Child and Infant CPR & First Aid

Homeland Security Training

Chem/Bio/Radiation reminders and instructions

Key Reminders

Scene safety, 911 or emergency numbers, assessment, treatment, incident documentation, follow-up care and BBP cleanup reminders

Assessment Help

Reminders and questions for assessment & easy EMS handoff documentation

Multilingual

Decreases training & communication difficulties in multiple language organizations

Updateable

Easy datacard access for future upgrades with various training organization protocol compliance datacards available

Easily Integrated

With: responder kits, first aid kits, complete responder systems, and training drill kits or training accessories already used by clients

Customizable

Custom orders for equipment are accepted (with or without LCD)

Current ECC/ILCOR/AHA Guidelines

A serious life-threatening injury or emergency can often lead to death when the person does what is intuitive instead of what is necessary. First aid training studies show that within 6-9 weeks after your training course, over 50% of first aid and CPR knowledge is forgotten.

First Voice solves these problems. We make first aid and CPR as easy as...

FVASTK-01C	First Voice Active Shooter Trauma Kit, Single Use, Single Victim with Hemostat and Bag
FVASTK-01	First Voice High End Active Shooter/Trauma Kit with Hemostat and Bag

What is the difference between **FVASTK-01C** and **FVASTK-01** in our Active Shooter Kits?

FVASTK-01C Includes the Combat Application Tourniquet® (CAT), a true one-handed, windlass spindle tactical tourniquet. Since its combat introduction by the U.S. Army in 2005, the CAT has decreased the mortality rate due to extreme exsanguination by 85%. It features a Single Routing Buckle for faster application, decreased blood loss, effective slack removal, fewer windlass turns, and simplified training with single protocol application standards

FVASTK-01 contains a lower cost but highly-effective Rapid Application Tourniquet System (RATS). This one-handed tourniquet allows the user to wrap and 'cleat off' the severe bleed. RATS are less bulky than CAT systems and the smaller band makes it a better choice to treat animals, children and the elderly.

The Emergency Bandage

Emergency Bandage is an innovative, combat proven first-aid device for the staunching of blood flow from traumatic hemorrhage wounds in pre-hospital emergency situations. For years, one of the most preventable causes of death in non-fatally wounded people has been the inability to quickly and effectively stop bleeding. This all-in-one device consolidates multiple first-aid devices such as a primary dressing, pressure applicator, secondary dressing, and a foolproof closure apparatus to secure the bandage in place. This internationally patented and FDA approved bandage is the ideal solution for emergency treatment when every second counts. The Emergency Bandage is designed for quick and easy application by professional and non-professional caregivers to provide effective, multi-functional treatment. The Emergency Bandage's sterile, non-adherent pad applies pressure to any site, can be easily wrapped and secured, and has an additional application, similar to a tourniquet, to further constrict blood-flow. The product is so easy to use that even an injured person can self-apply the bandage with one hand.

Stop the Bleed

Stop the Bleed is a national awareness campaign and call-to-action sponsored by Department of Homeland Security. Stop the Bleed is intended to cultivate grassroots efforts that encourage bystanders to become trained, equipped, and empowered to help in a bleeding emergency before professional help arrives.

Become Empowered

No matter how rapid the arrival of professional emergency responders, bystanders will always be first on the scene. A person who is bleeding can die from blood loss within five minutes, therefore it is important to quickly stop the blood loss. Those nearest to someone with life threatening injuries are best positioned to provide first care.

Save a Life

You may be able to save a life by taking these simple actions immediately after the trauma:

1. Having access to and using the right supplies
2. Being trained on what to do
3. Using technology like EMMA (page 9) to better manage emergencies in-house and improve on-site assistance help from 911 dispatched responders

Contact us at [888-473-1777](tel:888-473-1777) or info@firstvoice.us for more information on becoming an in-house Stop the Bleed trainer or setting up a training class today.

TS-Z-035	Celox Z Folded 3" x 5' Roll High Density Hemostatic Blood Clotting Gauze

Using Celox

Celox use is easy. Pour, Pack And Press.

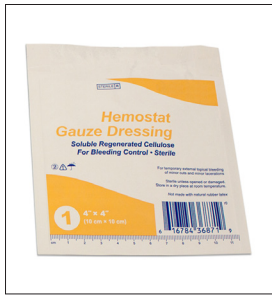

Pour on to the area of the wound.

Pack any cavity with either Celox or gauze.

Press. Compress the wound to push the Celox into place and stop blood flow for a short period while the Celox clot develops and strengthens.

The amount of time and pressure required depends on the pressure at which blood is coming out of the body. For life-threatening bleeding strong pressure for 1 minute (with Celox Rapid), 3 minutes (with Celox Gauze) or 5 minutes (with granules). Should a wound start to re-bleed (and you believe Celox was put over the bleeding area) then just hold pressure for longer. If you suspect Celox is no longer contacting the area where the bleeding is coming from, then remove and apply a fresh pack. Additional packs can be used if required.

Bleeding

Control of bleeding is an important first aid skill. Standard first aid bleeding control includes applying direct pressure with or without gauze. The 2015 International Liaison Committee on Resuscitation (ILCOR) systematic review evaluated the use of pressure points, elevation, local application of ice, tourniquets, and hemostatic dressings for the control of bleeding compared with direct pressure.

Findings

- There continues to be no evidence to support the use of pressure points or elevation of an injury to control external bleeding.
- There are limited data from the hospital setting demonstrating a benefit from application of localized cold therapy compared to direct pressure alone to closed bleeding, such as a bruise or hematoma.

Tourniquets

Tourniquets can be effective for severe external limb bleeding. The use of tourniquets in the pre-hospital setting for severe external limb bleeding has been studied in the military setting and civilian EMS setting. The effectiveness and complications of different types of tourniquets, such as military tourniquets compared with commercial or improvised tourniquets, was not reviewed for 2015. However, tourniquets have been found to control bleeding effectively in most cases. Potential complications include compartment syndrome, nerve damage, damage to blood vessels, and amputation or limb shortening.

Complications may be related to tourniquet pressure and duration of occlusion, but there is insufficient evidence to determine a minimal critical time beyond which irreversible complications may occur. Because the rate of complications is low and the rate of hemostasis is high, first aid providers may consider the use of a tourniquet when standard first aid hemorrhage control does not control severe external limb bleeding.

A tourniquet may be considered for initial care when a first aid provider is unable to use standard first aid hemorrhage control, such as during a mass casualty incident, with a person who has multi-system trauma, in an unsafe environment, or with a wound that cannot be accessed.

Although maximum time for tourniquet use was not reviewed by a 2015 ILCOR systematic review, it has been recommended that the first aid provider note the time that a tourniquet is first applied and communicate this information with EMS providers. It is reasonable for first aid providers to be trained in the proper application of tourniquets, both manufactured and improvised.

Specifically designed tourniquets appear to be better than ones that are improvised, but tourniquets should only be used with proper training.

Keeping the Flow Up

In order to be able to save the lives of sudden cardiac arrest patients and avoid neurological damage, a steady supply of oxygen to the heart and brain is necessary. Life-sustaining circulation can be created through effective and uninterrupted chest compressions. Performing manual chest compressions of high quality is both difficult and tiring, and impossible in certain situations. The quality varies depending on who provides CPR and deteriorates quickly after only 1 or 2 minutes.

Meet LUCAS® 3, Version 3.1, Automated Chest Compression System

The latest LUCAS® 3.1 version allows professional users to tailor setup options for compression rate/depth, pauses, alerts, timer, and ventilation features to meet local emergency care protocols. LUCAS® 3.1 now includes Wi-Fi® connectivity with a LIFENET® System account to enable users to set up device readiness notifications, modify setup options and transmit device reports wirelessly to users over e-mail when not in clinical use. Users can set automatic e-mail reports to facilitate post-event reviews and device management reports on battery expiration dates, last service date, and device maintenance.

LUCAS® - Standardizing the Quality of Chest Compressions

The LUCAS™ Chest Compression System is a safe and efficient tool that standardizes chest compressions in accordance with the latest scientific guidelines. It provides the same quality for all patients and over time, independent of transport conditions, rescuer fatigue, or variability in the experience level of the caregiver. By doing this, it frees up rescuers to focus on other life-saving tasks and creates new rescue opportunities.

Safe and Effective

Experimental studies show that the mechanically controlled LUCAS™ compressions are able to sustain a higher blood flow to the brain and heart compared to manual compressions. The side-effects are similar as for manual compressions. LUCAS® does compressions according to guidelines - on the middle of the chest, not more, not less.

Easy and Quick

The LUCAS® device is easy to carry and handle, and can be applied to the patient with interruptions of manual compressions of less than 20 seconds.

Physio Control LUCAS® 1 and 2 Accessories

Accessories for LUCAS® 1

LUCAS® 1
(No longer manufactured, but
accessories still available)

Part Number	Item Description
11576-000035	LUCAS® 1 Carry Bag (backpack)
11996-000278	LUCAS® 1 Connector - Chemtron Air
11996-000279	LUCAS® 1 Connector - Ohmeda Air
11996-000280	LUCAS® 1 Connector - Puritan Bennet Air
11996-000281	LUCAS® 1 Connector - Diss Air
11996-000282	LUCAS® 1 Connector - Schrader Air
11996-000283	LUCAS® 1 Connector - Oxequip Air
11996-000285	LUCAS® 1 Regulator
21996-000061	LUCAS® 1 Extension Hose

Accessories for LUCAS® 2

LUCAS® 2
(No longer manufactured, but
accessories still available)

Physio Control LUCAS Accessories

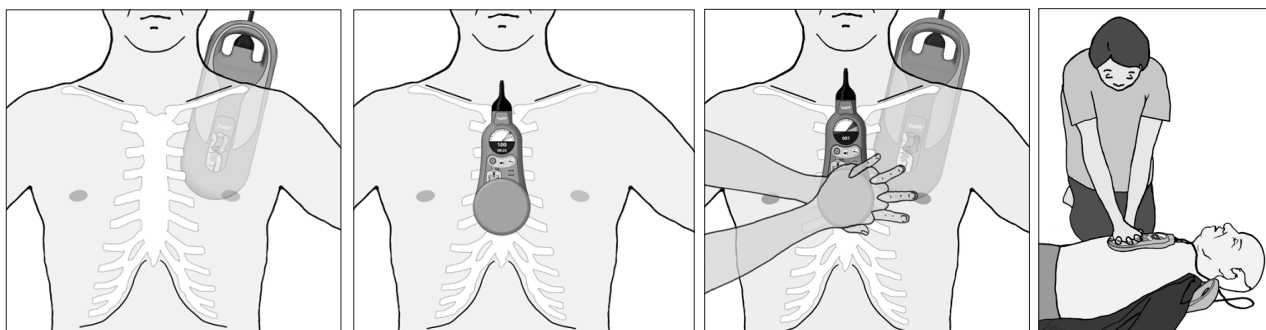

Part Number	Item Description
80596-000003	TrueCPR™ Coaching Device
11260-000044	TrueCPR™ Carrying Case

TrueCPR™ Coaching Device

The TrueCPR™ Coaching Device is designed to optimize the quality and performance of manual CPR by providing feedback to rescuers in both real-time and after the event. The TrueCPR™ device measures compression depth on compliant surfaces and in moving vehicles using a unique technology called Triaxial Field Induction.

Triaxial Field Induction

Triaxial Field Induction (TFI) is a unique technology that allows the TrueCPR™ Coaching Device to accurately measure compression depth on compliant surfaces or in moving vehicles. Magnetic fields emit from the backplate in three directions. As the chest pad moves through the field, it is able to calculate its distance from the backplate at any point in time, giving rescuers a true anterior/posterior chest compression depth measurement.

Advanced Care Life Support (ACLS) Defibrillators

Accessories for LIFEPAK® 12

LIFEPAK® 12
(Discontinued, accessories still available)

Accessories for LIFEPAK® 12

Part Number	Item Description
11110-000029	LIFEPAK® 12/20 3-Lead ECG Cable

LIFEPAK® 15

The LIFEPAK® 15 monitor/defibrillator is the standard in emergency care for ALS teams who want the most clinically innovative, operationally effective, and LIFEPAK TOUGH™ device available today.

Evolving from its original platform, the 15 features temperature monitoring and external power to complement 360J of energy and 12-lead ECG transmission capability. And that means your team can be even more effective.

Key Technologies:

The LIFEPAK 15 monitor/defibrillator has 6 main operating modes:

AED Mode: for automated ECG analysis and a prompted treatment protocol for patients in cardiac arrest.

Manual Mode: for performing manual defibrillation, synchronized cardioversion, noninvasive pacing, and ECG and vital sign monitoring.

Archive Mode: for accessing stored patient information.

Setup Mode: for changing default settings of the operating functions.

Service Mode: for authorized personnel to perform diagnostic tests and calibrations.

Demo Mode: for simulated waveforms and trend graphs for demonstration purposes.

The 15 is LIFEPAK TOUGH, with improved ruggedness and durability you can rely on.

Works when dropped, kicked, soaked or dirty

The LIFEPAK 15 monitor/defibrillator passes 30-inch drop tests, which is equal to falling off a cot or dropping it in transit. And with an IP44 rating, it doesn't matter how wet or dirty it gets, so you can keep working in steady wind, rain and other harsh environments.

Toughened inside and out

We heard from emergency response teams that they wanted a tougher device—so we added a shock-absorbing handle, a double-layer screen that can take a beating from doorknobs and cot handles, and redesigned cable connections for confident monitoring and therapy delivery.

Unmatched field service

The unit's self-checking feature alerts our service team if the device needs attention. Our on site maintenance and repair, access to original manufacturer parts, and highly trained, experienced service representatives give you the peace of mind that your LIFEPAK 15 monitor will be ready when you need it.

NOTE: The Physio Control ACLS Defibrillator that is currently being manufactured at the time of print of this guide is the LIFEPAK® 15 (see page 33 for accessories) and LIFEPAK® 20e Defibrillator/Monitor (see page 36 for accessories).

70507-000091	LIFEPAK® 20e Defibrillator/Monitor with Package

LIFEPAK® 20e

As part of the Physio-Control Code Management System, the 20e meets all your defibrillator/monitor needs in a compact, affordable package. Designed specifically for crash cart use, it is simple yet powerful, and ready when you are. With features like capnography, a CPR metronome, and the ability to remotely send data to CODE-STAT™ data review, the LIFEPAK 20e defibrillator/monitor with CodeManagement Module helps your hospital meet the demands of performance improvement and better prepare for tomorrow's emergencies.

The LIFEPAK 20e defibrillator/monitor has seven main operating modes:

Manual Mode: Provides a normal operating capability for ALS users.

Allows access to manual mode energy selections up to 360J, synchronized cardioversion and pacing. ECG waveform is displayed.

AED Mode: Provides a normal operating capability for BLS users. All user features are available except manual defibrillation, synchronized cardioversion, pacing, and access to archived patient records. Provides shock energy defaults up to 360J. User selectable option to display ECG waveforms and/or visual AED prompts.

Setup Mode: Allows the operator to configure the device settings.

Service Mode: Allows the operator to execute diagnostic tests and calibrations, to display device module software and hardware versions, and to display and print the diagnostic code log.

Inservice Mode: Simulated waveforms are available for demonstration purposes. The waveforms consist of short segments of realistic data, which are repeated to form a continuous waveform.

Archive Mode: Provides operator the opportunity to access records of previous patients for review, transmission, printing, editing or deletion.

Auto Test Mode: Performs daily self-tests.

Key Technologies:

Escalates to 360J. Every Physio-Control defibrillator can escalate energy to an industry leading 360 joules for difficult-to-defibrillate cardiac arrest victims.

Dual mode design. 20e features an intuitive door system—for both AED and manual use. It's a simple effective AED for first responders, yet it easily transforms into a manual defibrillator for advanced care professionals.

The CodeManagement Module™

adds waveform capnography and wireless connectivity to enhance your hospital's ability to effectively manage resuscitations from preparedness through review.

Find out how the LIFEPAK 20e defibrillator/monitor with CodeManagement Module can take your performance to the next level.

NOTE: The Physio Control ACLS Defibrillator that is currently being manufactured at the time of print of this guide is the LIFEPAK® 15 (see page 33 for accessories) and LIFEPAK® 20e Defibrillator/Monitor (see page 36 for accessories).

Evacuation Tools

Part Number	Item Description
TS-EPC01	Evacusafer Standard Chair
TS-EPC02	Evacusafer Excel Chair
TS-EES01	Evacusafer Slider

Evacusafer Chair Benefits

- 4 wheels aid stability and maneuverability on any landing or level ground
- Track allows for a safe, smooth, controlled descent down stairs
- Open seat and weight bearing armrest make self-transfer for wheelchair users easier
- Flat seat provides familiar and comfy seating
- Cushion offers support of head during the descent
- Over shoulder harness along with the arm rest helps those with weak core strength and offers additional safety over single belt
- Extra handling grip for operator during use
- Option to ascend stairs or over obstacles via integrated handles
- Extra safety strap to secure legs of persons with minimal to zero control
- Takes up minimal wall space

Technical Specifications

Description	Standard/Excel
Height (folded)	44 in/44 in
Height (open)	57 in/56 in
Depth (folded)	6 in/11 in
Depth (open)	28 in/39 in
Width	21 in/25 in
Weight	27 lbs/30 lbs

Length in use	57 in/56 in

Evacusafer Slider Features

- Increased weight capacity of 400 lbs
- Wipe clean material
- 50 mm foam mattress
- Tough, vinyl base material slides over various surfaces
- 3 cross-body straps
- Four integrated side handles
- Head and foot end straps with variable length handles
- Adjustable head support cushion
- Fixed foot pocket
- Lightweight, sturdy construction
- Extremely portable and easy-to-use
- Virtually maintenance free
- Long lasting and durable
- Quick release belts
- Two built in secondary carry handles on each side
- Super smooth underside aids movement across the floor
- Hard wearing, heavy-duty base
- Certified on-site training packages available

BHAZ01-50	7-10 Gallon Red Biohazard Bag (50/pack)
TSR270-049-10	Absorbent Powder (2 oz. bag)

What is the OSHA BBP Standard?

OSHA's bloodborne pathogen standards lay down the guidelines for employers to protect their workers from these 'life-threatening' pathogens.

- Establish a written plan to eliminate or minimize occupational exposures.
- Implement the use of universal precautions.
- Make available hepatitis B vaccinations to all the workers with occupational exposure.
- Employers must update the plan annual to reflect all the changes.
- Use labels and signs to communicate hazards.
- Identify and use engineering controls to isolate or remove the blood borne pathogens hazard from the workplace.
- Identify and ensure the use of work practice controls for reducing the possibility of exposure by changing the way a task is performed.
- Make available post-exposure evaluation and follow-up to any occupationally exposed worker who experiences an exposure incident.
- Provide personal protective equipment (PPE), such as gloves, gowns, eye protection and masks.
- Provide proper information and training to workers.
- Maintain worker's medical and training records.

What Can First Voice Do for You?

Improve Skills

Think Safe's Emergency Instruction Device (EID) and Self-contained Emergency Treatment (SET) Systems are the product innovations of Think Safe. These product innovations are patented and bring technology to the first aid industry. With the simple press of a button, instant detailed American Heart Association/ECC/ILCOR approved instructions on what to do are immediately heard and seen by the responder or lay rescuers providing care. But we did not stop program improvements and skills improvements by just bringing our innovations to market. Additionally, our First Voice products and our First Voice Training (www.firstvoicetraining.com) options (online, blended, in-person, in-house) give rescuers and responder teams the capability to refresh on skills anytime and improve access to information and training.

What Can First Voice Do for You?

Provide Efficiency

Think Safe's First Voice products decrease chaos and any unnecessary steps during emergencies by providing any first responders or rescuers on scene with organized and accurate first aid tools, instructions and the personal protective equipment (PPE) necessary for trauma situations during the first few minutes of care. Think Safe software and other services also improve efficiencies in maintenance and upkeep of the total first aid program or emergency response program.

What Can First Voice Do for You?

Reduce Risks

Think Safe's First Voice products and services offer more than standard first aid programs and traditional ANSI unitized first aid kits. First Voice products are designed with easy-to use organized supplies that are ready to protect the responder and treat the victim, according to updated science and OSHA compliance standards. Restocking is simplified through the use of First Voice pre-packaged supply modules and our systems are all designed with easy "ready to run" status viewing designs plus are easy to restock or refill. SET Systems come in ergonomic backpack, EMS jump bag (roll-out), and rugged Pelican lifetime guaranteed dustproof and waterproof hard case configurations to fit your storage and response environmental needs. In addition, all SET Systems can accommodate an Automated External Defibrillator (AED) which improves care and response times during life threatening emergencies. But, Think Safe does not stop at products. Think Safe also provides custom developed software (www.firstvoicemanager.com) and other services that ensure maintenance and upkeep of the total program and reduce risk of legal liability.

Part Number	Item Description
AAM1000	AmpuSave Amputation Care Kit
AAM6000	AmpuSaveAmputation Care Kit (6/pack)

AmpuSave

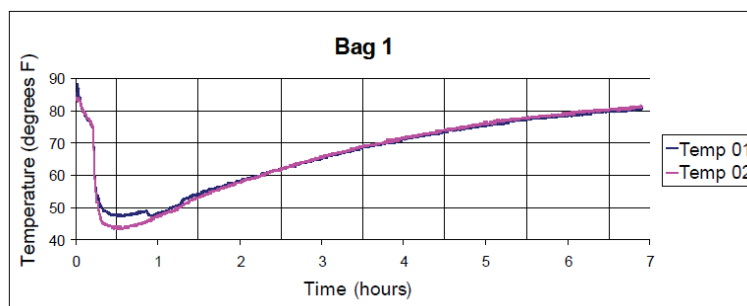

AmpuSave reduces workers compensation, disability, and rehabilitation costs. Over 70% of the time the severed digit is a complete loss, being forgotten at the scene or transported improperly!

AmpuSave is a medical transport device that allows for proper storage and transport of severed digits and avulsions. AmpuSave consists of a storage compartment for a cold compress (which is included and sealed) and another storage compartment for gauze, saline solution, and an instruction card for proper preparation, as well as the necessary storage of the amputated digit or avulsion for transport. The included instruction card allows for recording the time of the injury and the injured party's name for accurate reporting of the incident.

AmpuSave Testing Results

The test...

Four thermocouples* were secured to the inside of the AmpuSave bag. The cold pack was then activated and temperature data was collected. Two thermometers were placed on each side of the AmpuSave bag (both on the inside compartments) to detect any variation in temperatures.

The results...

The chart above shows the results of AmpuSave testing that was done at Iowa State University. The sample maintained a temperature below 50F for over 1 hour, below 60F for over 2 hours, and below 70F (room temperature) for over 3 ½ hours. The product sample did not reach "freezing" (32F) which is harmful for reattachment of digits and avulsions. The product sample maintained adequate temperatures for digit and avulsion average transport time to the hospital by EMS or other method of transportation.

*Definition:

A thermocouple is a thermometer that outputs an electrical signal calibrated to the temperature. Thermocouples allow monitoring of the temperature via computer and electronic documentation, eliminating human reporting errors

What Can First Voice Do for You?

Reduce Costs

Think Safe has case studies that show the client pays for the First Voice product and service investment in just one year or less. Think Safe products and services are well worth the small up front investment. Better response means decreased worker's compensation insurance, lost time at work, replacement laborer costs and disability costs. Think Safe takes mandated training to a new level by pairing it with our proven technology for any responder team, first aid rescuer or employee use. Yet, the costs of the program are proven to decrease and the products and services are paid for through other program savings. A client recovers the investment made in under one year on average when coupled with a integrated transition to online, in-house or blended training methods. Ask for your case study to see how other companies have saved money every year, even during the initial year of implementation.

Financing/Leasing Options

Think Safe's monthly low cost and affordable leasing options mean sticking to a budget without shelling out thousands for new equipment. First, let us help you figure out the type of equipment you need and trim the fat off your total budget. Once you have your budget needs, fill out an online leasing application at think-safe.com/finance. We'll take care of the rest. All in only approximately 4 hours turnaround!

Leases are available for amounts from \$1,000 to hundreds of thousands! Why lease?

- Preserve your working capital
- Take advantages of possible Section 179 Federal tax deductions and standard depreciations
- Bank credit lines are NOT affected
- Make monthly payments
- No prepayment penalties
- It's quick and easy

Pre-approvals also accepted! You'll find the pre-approval application online at think-safe.com/finance. We'll contact you with your pre-approved amount.

Contact Us

Think Safe facilitates and oversees the management of AED programs, emergency preparedness, emergency response and first aid programs through our software, services and products. Think Safe management team members and employees sit on various industry committees and guidelines review committees and are presenters or guest speakers at events across the nation. Our team has a vast technical knowledge of the first aid and defibrillator marketplace due to the tens of thousands of existing relationships we have developed and nurtured. We consult with clients and are technical experts in emergency readiness and First Aid, AEDs, and medical and environmental emergency response programs; we ensure that organizations are compliant with local, state and federal regulatory requirements.

Discovery Dialogue

Have you asked your client:

- ☐ Would they like a first aid program review to ensure they are OSHA compliant?
 - Training
 - Products
 - Program for First Aid
 - CPR
 - BBP
 - ...and more
- ☐ Would they like to look at current OSHA Evacuation and Emergency Preparedness expectations?
 - Training
 - Products
 - Program for Egress/Evacuation/Shelter In Place/Lockdown/Secure Buildings
 - ...and more
- ☐ Where are AEDs mandated and expected and how do I decrease my liability or comply with state AED owner laws?
 - Training
 - Products
 - Program for AEDs
 - Integrated First Aid Systems
 - ...and more
- ☐ Is your AED under recall or no longer covered by product liability insurance?
- ☐ Can you be recycling your AED or AED accessories? Recycling AED batteries saves 200 tons of hazardous waste annually. think-safe.com/recell
